Motorola Solutions MOTOTRBO™ Connect Plus

Text Messaging Network Architecture Overview

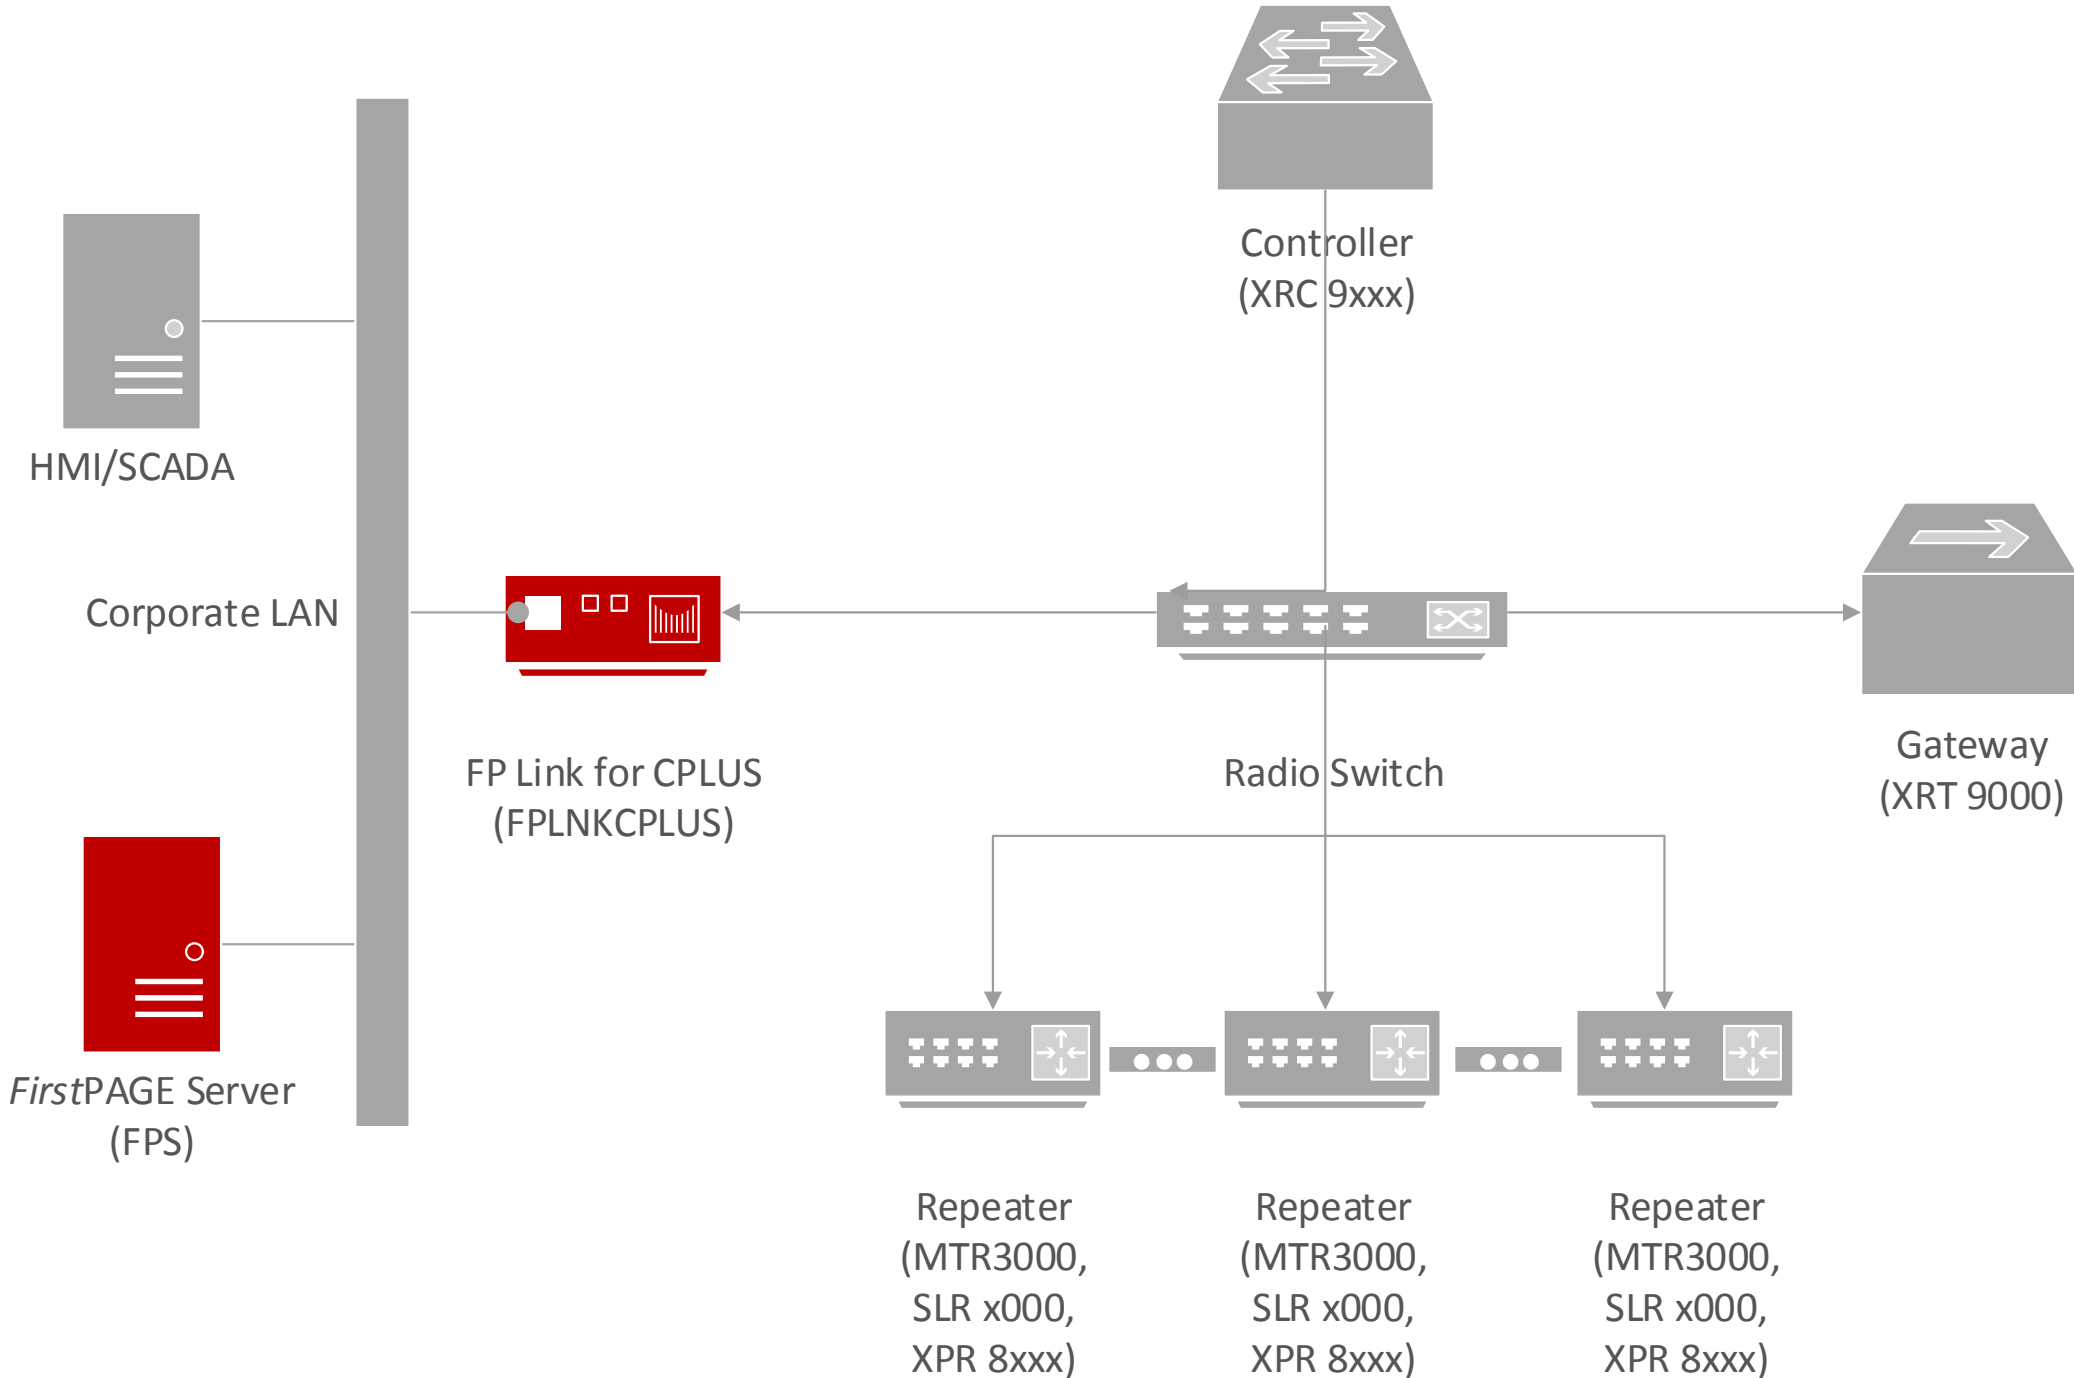

Motorola MOTOTRBO radios, being a digital-based product, provide a data component which can be utilized to send text messages. SeQent offers a solution enabling “*FirstPAGE Server*” (FPS) to send messages to the MOTOTRBO Connect Plus Controller for delivery.

“*FirstPAGE Server*” may be interfaced with Connect Plus by way of a *FirstPAGE Link* product known as: “*FirstPAGE Link for CPLUS*” (FPLNKCPLUS). “*FirstPAGE Link for CPLUS*” provides an SNPP front end to which “*FirstPAGE Server*” can be connected. This enables the Connect Plus text messaging and presence protocols on the back end to route messages to the MOTOTRBO network for delivery.

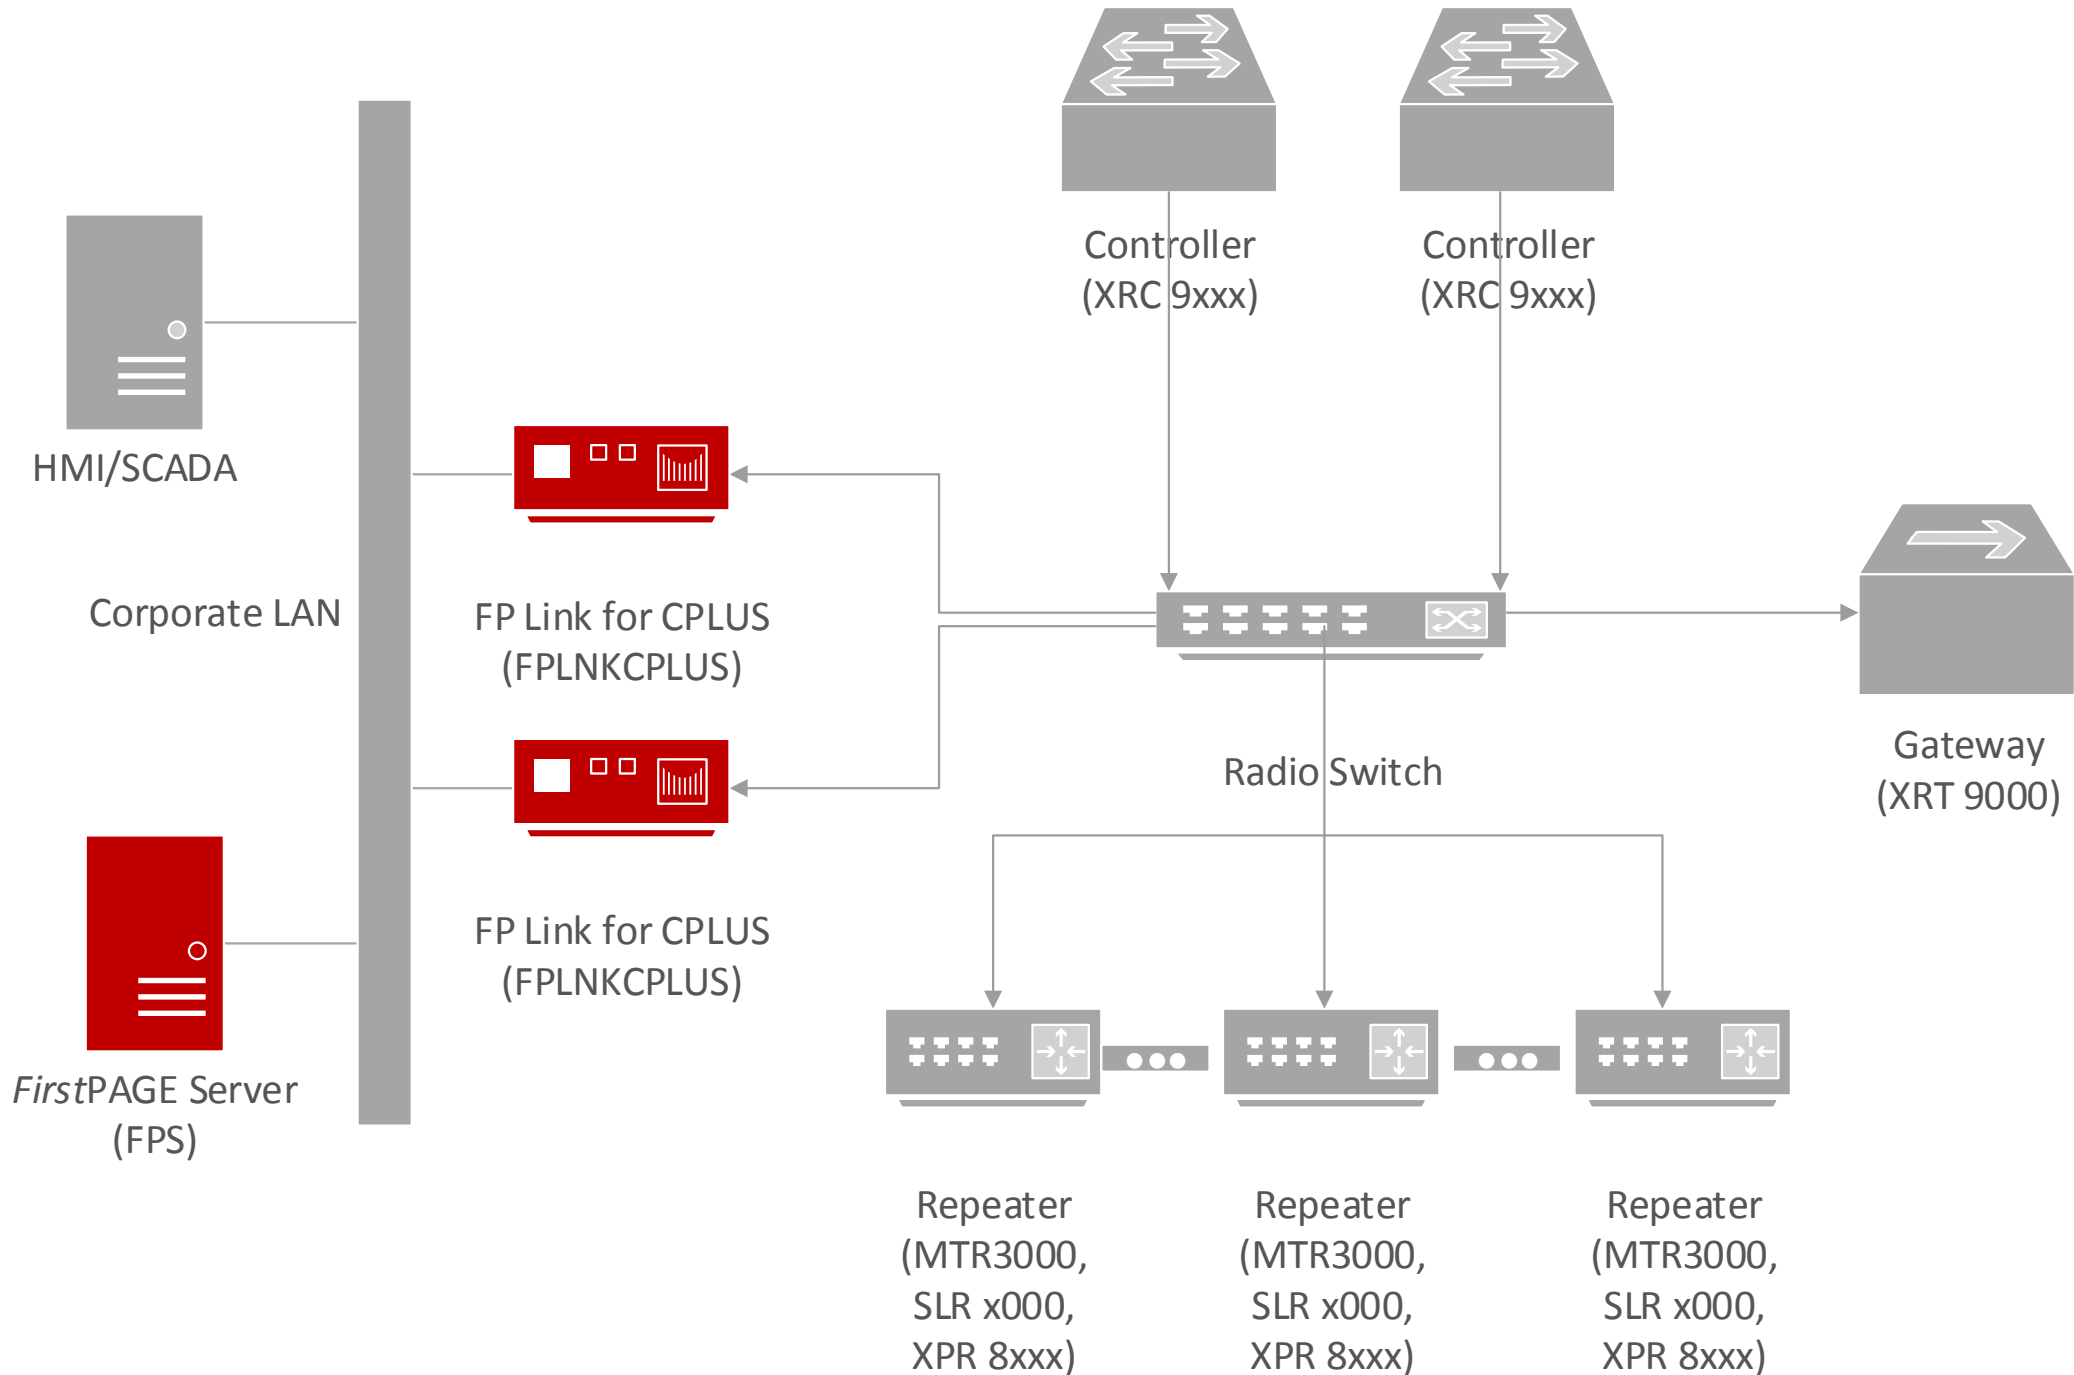

“*FirstPAGE Link for CPLUS*” implements an SNPP server to enable SNPP compliant applications to remit text messages to the MOTOTRBO platform. This SNPP interface is the same protocol utilized to connect too many mobile phone carriers. In the case of MOTOTRBO Connect Plus, the Network ID in *FirstPAGE Servers* Destination configuration for Connect Plus destinations is the numeric radio id (SUID) or talk group id (TGID).

MOTOTRBO Connect Plus is typically implemented with a private network providing connectivity between the MOTOTRBO radio system components.
